

Enrollment Analysis Fall 2017

Addendum

Prepared by:
SDCCD Office of Institutional Research and Planning
September 2017

Summary Analysis

Evening Class Enrollments Compared to Online Class Enrollments

- There is a clear correlation between the number of added and deleted sections and the shifts in enrollment, regardless of the modality or time of day the class is offered (e.g., evening or online).
- When sections are reduced, enrollments decline and when sections are added, enrollments increase.
- The increase in the number of online sections and decrease in the number of evening sections over the past three fall terms has simultaneously shifted the enrollment capacity, and thereby, the direction of enrollment trends for both evening and online classes.
- Overall, across the credit colleges evening class enrollments declined at a greater rate than would be expected based on the number of evening section reductions between Fall 2015 opening day and Fall 2017 opening day.
- Similarly, online enrollments did not increase as much as expected considering the number of added
 sections.
- There is no evidence that points to the addition of online classes and deletion of evening classes having an adverse or zero sum effect.
- Online classes continue to fill at a higher rate than evening classes, which indicates there is a high demand for online classes.
- Although enrollments have softened overall and fill rates are lower compared to previous fall terms, the average fill rate for online classes at the three credit colleges remains higher than that of evening classes in spite of declining enrollment; 77% evening class fill rates compared to 82% online class fill rates.

Waitlist Sections

- On average, approximately one-third of waitlisted students at the credit colleges are added to a
 class of their waitlisted choice as of opening day, while approximately half of the students on
 waitlists are still pending as of opening day, and about 17% of waitlisted students either drop
 themselves off the waitlist or their waitlist registration expires.
- Although the demand for classes has not been as great this Fall 2017 at opening day compared to Fall 2016 (40% of sections compared to 42%, and 14% of seats compared to 15%), there is still evidence of demand and of meeting the demand.
- As of opening day Fall 2017, approximately 40% of day scheduled courses with waitlisted sections
 had other daytime sections of the same course still open, while 30% of evening scheduled courses
 with waitlisted sections of the same course had other evening sections still open, and 29% of online
 scheduled courses with waitlisted sections of the same course had other online sections still open as
 of opening day.
- Similarly, amongst courses with cancelled evening sections, 30% had at least one open day section
 at City, 54% had at least one open day section at Mesa, and 38% had at least one open day section
 at Miramar.
- The percentage of open sections of courses with both day and online sections is lower compared to
 the open evening section with matching day classes. This indicates that as day sections reach
 capacity, students are enrolling in an online class alternative more often than an evening class.

Evening Class Enrollments Compared to Online Class Enrollments

Reduced Sections = Decreased Enrollments. There is a clear correlation between the number of added and deleted sections and the shifts in enrollment, regardless of the evening or online offering. In other words, when sections are reduced, enrollments decline, and when sections are added, enrollments increase. The graphs in Figure 1 on the next page demonstrate this correlation and the reciprocal trends.

Evening to Online Section Ratio. The number of evening sections has dropped over the past three fall terms from almost twice as many evening sections as online sections to one and half as many evening to online sections offered in Fall 2017. The increase in the number of online sections and decrease in the number of evening sections over the past three fall terms has simultaneously shifted the enrollment capacity in both.

Enrollment Capacity. Overall, as of opening day Fall 2017 there is 25% more enrollment capacity in online than in evening classes (29,942 compared to 23,903, respectively). This logically will account for lower overall enrollment in evening and higher overall enrollment in online classes.

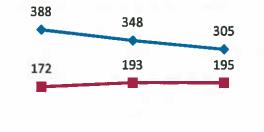

Fill Rates. The fill rates in both evening and online classes have shifted over the past three fall terms. However, online classes continue to fill at a higher rate than evening classes, which indicates the demand for online classes. Although the average online class fill rates for all three credit colleges over the past three fall terms have dropped (82% in Fall 2015 compared to 81% in Fall 2017), evening fill rates have dropped even more (78% in Fall 2015 compared to 73% in Fall 2017), and are lower on average compared to online fill rates (77% and 82% respectively).

Rate of Increase/Decrease. Between Fall 2015 and Fall 2017, if each section yielded an average class size of 30 students per section, the credit colleges should have yielded a decrease of 4,710 evening enrollments (21% decrease) as a result of the reduction of 157 evening sections. However, there was a decrease of 4,980 evening enrollments (22%) instead. Given this same notion of 30 students per section, with 175 online sections added between Fall 2015 and Fall 2017 at all three credit colleges, the expected enrollments for online classes would be approximately 24,808 (27% increase), but instead was only 24,244 (24% increase). Both rates reflect softening enrollments.

Conclusions. Overall, across the credit colleges evening class enrollments declined at a greater rate than would be expected based on the number of section reductions between Fall 2015 opening day and Fall 2017 opening day. Similarly, online enrollments did not increase as much as the expected rate based on the number of sections added. However, online classes continue to fill at a higher rate than evening classes, which indicates there is a higher demand for online classes. There is no evidence that points to the addition of online classes and deletion of evening classes having an adverse or zero sum effect.

Waitlist Analysis

Overall Demand. The demand for classes is not as great this Fall 2017 as of opening day compared to Fall 2016 (35% of sections compared to 39% and 14% of seats compared to 15%). However, there is still demand.

- On average approximately one-third of students who are on waitlists for classes that have a cap
 of 25 or greater are added to the class of their waitlisted choice as of opening day (33% in Fall
 2017 to 35% in Fall 2016)
- Approximately half of the students on waitlists are still pending as of opening day (51% in Fall 2017 compared to 47% in Fall 2016).
- The percent of waitlisted students who either drop themselves off the waitlist or whose waitlist registration expires is approximately 17%. However, this has shifted somewhat from 18% in Fall 2015 to 14% in Fall 2017.

Online and Evening Demand. The trend for on-campus and online courses is very similar:

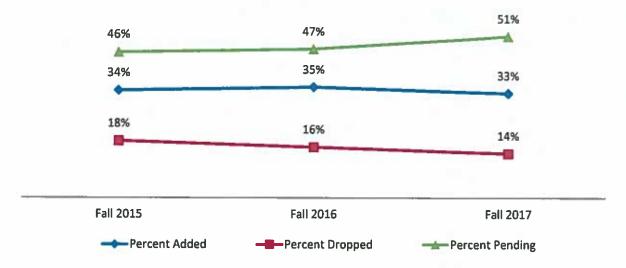

- On average about one-third of students in both online and on-campus waitlists are able to add their course as of opening day (on-campus 34% and online 36%).
- Nearly fifty percent of online and on-campus waitlisted students are left pending (on-campus 48% and online 47%) as of opening day.
- The percentage of students dropping waitlisted on-campus and online courses is comparable (on-campus 17% and online 15%).

City College Demand. Over one-third of students on waitlists add the waitlisted course as of opening day (35% in Fall 2017 to 37% in Fall 2016), while approximately half of the students on waitlists are still pending as of opening day (48% in Fall 2017 compared to 44% in Fall 2016). Approximately 17% of waitlisted students either drop themselves off the waitlist or the waitlist registration expires.

Mesa College Demand. The trend is similar with over one-third of students on waitlists adding the waitlisted course as of opening day (33% in Fall 2017 to 36% in Fall 2016), while approximately half of the students on waitlists are still pending as of opening day (52% in Fall 2017 compared to 47% in Fall 2016). Approximately 16% of waitlisted students either drop themselves off the waitlist or it expires.

Miramar College Demand. One-third of students on waitlists add the waitlisted course as of opening day (33% in Fall 2017 to 33% in Fall 2016), while approximately half of the students on waitlists are still pending as of opening day (53% in Fall 2017 compared to 49% in Fall 2016). Approximately 16% of waitlisted students either drop themselves off the waitlist or the waitlist registration expires.

Figure 2. All Colleges Waitlist Status: On-campus & Online

Open Sections. As of opening day Fall 2017, approximately 40% of day scheduled courses with waitlisted sections had other daytime sections of the same course still open (882 open sections), while 30% of evening scheduled courses with waitlisted sections of the same course had other evening sections still open (152 open sections), and 29% of online scheduled courses with waitlisted sections of the same course had other online sections still open as of opening day (161 open sections).

Table 1. Fall 2017 Open Sections for Waitlisted Courses as of Opening Day

Evening Section Cancellations. Between the time registration first opened for Fall 2017 and opening day, City had cancelled 24 evening sections (7% of evening sections), Mesa had cancelled 26 evening sections (6% of evening sections) and Miramar had cancelled 8 evening sections (4% of evening sections). Amongst courses with cancelled evening sections, 30% had at least one open day section at City, 54% had at least one open day section at Mesa, and 38% had at least one open day section at Miramar. Amongst courses with cancelled evening sections, 26% had at least one open evening section at City, 42% had at least one open evening section at Mesa, and 25% had at least one open evening section at Miramar.
